

Question one : What are your core values and beliefs?

Answer : As a developer, I have to stay alert so I am also able to work with every outcome that must be faced. Also, practice with problem-solving issues. In the development sector, problem-solving skills play a crucial role in my development career. So stay awake or stay connected with Those great developers who face the same consequences like errors and other issues on their journey. Respect your seniors because struggling to work hard makes them your seniors. Be honest. Honesty is a fundamental principle that I uphold.

Question Two : What are your goals and aspirations?

Answer : My Goal is always to stay updated about my career or specifics in my Stack. Currently, I am working with the MERN stack. So staying updated is one of the best goals of my career. and also help others to better improvement in this section. And I also want to advance my career to forward. Skill improvement day by day is a crucial part of my daily routine. Must stay focused on every possible scenario for error or other issues that come to my working process.

My aspiration is, to make an app for those who are oppressed by others. Sometimes facebook google or any other social media play a dirty role with Muslims. Muslims cannot raise their voice. I want to make a platform where Muslims can express not only Muslims but every person who is unable to get justice from the government or the authorities. This platform helps them to bring justice to their life. And I also want to show the world the real version of evil people's deeds who without any reason do evil with the poor or the weak.

Question Three : What are the first steps you will take to build your personal brand?

Answer : I will create a professional portfolio to showcase my skills and knowledge and my projects. As a developer I have to be must stay consistent with my LinkedIn profile. Furthermore, I am going out of my comfort zone and contributing to an open-source project. I will take full opportunity in social media to expand my network and show people my skills. If possible I will attend various developer events or if possible I will meet my developer brother to discuss various issues. I also take advantage of creating content on social media to help others gain knowledge.

throughout this process, my learning process will continue also stay with practice and make projects that will bring me various experiences.

With this process I will take little or first step to build my personal brand.

Question Four: How does personal branding differ from self-promotion, and why is this distinction important?

Answer :

Self Promotion :

Self-promotion is a short-term method to stay in the tech world.

Self-promotion may last over days to get attention from other developers.

Self-promotion depends on specific accomplishments.

Self-promotion sometimes stays self-centred not focusing on the broader impact on the community.

Self-promotion does not help properly to grow relationships with the other developers.

Personal branding :

Personal branding is a long-term process to stay and also focused on the tech world.

Personal branding is a better way to identify yourself and over days it does not get lost in the tech world.

Personal branding allows flexibility and more industry trends involved.

Personal branding shows achievement and also shows contribution to the community.

Personal branding helps to act more professionally with others and this process is good for communicating with more developers.

For communication and focus on the tech world personal branding is more good for every developer.

Question Five: What are you most proud of?

Answer :

As a MERN Stack developer, I must take pride in various sections. As a MERN stack developer, I build some projects that require deep understanding from various angles. When I build a project depending on MongoDB, Node.js, Express.js, and React.js my brain thinks as the backend process how data will come and also the frontend process how data will be received and modified and show the front of the user to accomplish my target on this project.

When I type code the huge number of code makes me feel proud that I can do the huge number of code. I also think I am part of the developer or tech industry when I build the MERN stack project.
